

HIMACHAL PRADESH, India (2001)

**DEMONSTRATIEPROJECT EN KOSTEN/BATEN-ANALYSE VOOR
WATERVERGARING EN GROEI VAN PLANTEN (PRADESH)**

Partner : RUCHI (India)

Solutions in the combat of desertification and the mitigation of drought do not lie only in water harvesting through various means, but also in soil conditioning of enormous surfaces of these drylands to enable them to stock the minimal volume of rainwater and nutrients for a longer period. Subsequent optimal use of that volume of available water and available nutrients should be a global objective.

RUCHI (Rural Centre for Human Interests, India) has set up a demonstration project for water conservation and healthy growth of plants in the state of Himachal Pradesh (N. India). The main objective of the project was to show the effect of the soil conditioner TerraCottem® on vegetable production. Therefore, a cost-benefit-analysis is made.
