

GADAP, Pakistan (2001)

**KOSTEN/BATEN-ANALYSE VOOR TOMATENPRODUCTIE M.B.V. DE
BODEMVERBETERAAR TERRACOTTEM**

Partner : SCOPE (Pakistan)

A demonstration project, set up with the NGO SCOPE PAKISTAN, was very successful in the Gadap area, close to Karachi.

The local Farmer's Union produced significantly more tomatoes with TC than with their traditional method (along irrigation canals). Adult fruit trees in poor condition, due to drought, revived and started producing after TC treatment of the soil around their roots.
